FUNDING OPPORTUNITY : NERC / ACTF ANALYTICAL SCIENCE & TECHNOLOGY STUDENTSHPH

The Natural Environment Research Council (NERC), in collaboration with the Trustees of the Analytical Chemistry Trust Fund (ACTF) of the Royal Society of Chemistry (RSC), is supporting a programme of Analytical Science and Technology Studentships. This Announcement of Opportunity invites prospective research supervisors to submit proposals for PhD studentships starting in the 2013/2014 academic year that focus on the development of new analytical techniques with potential applications in environmental science. The programme covers the full breadth of NERC science. The studentships must include a comprehensive training programme and be likely to make significant contributions to the advancement of analytical science in the UK. This is the programme’s fourth funding round. Twenty-one PhD studentships have been supported over the previous three funding rounds.

Private sector company and/or public sector organisation involvement via CASE studentships (involving a co-operating body, able to co-support the award) is strongly encouraged where it is appropriate.

The full text of the Announcement can be found at
http://www.rsc.org/ScienceAndTechnology/Funding/NERC.asp [1] and

The deadline for the receipt of proposals by NERC is 4pm on 11th October 2012
