We are delighted to announce that Professor Joanna Haigh and Professor Martin Siegert have started as Co-Directors of the Grantham Institute - Climate Change and the Environment.

They take over from Professor Sir Brian Hoskins.

Professor Haigh was President of the Society is the Head of the Department of Physics at Imperial. Alongside her new appointment, she will continue her research in the Department of Physics as Professor of Atmospheric Physics.

Professor Haigh commented “I am honoured to be taking on the role of Co-Director of the Grantham Institute at Imperial College. Under the leadership of its first Director Brian Hoskins, who will now become its Chair, the Institute has established a reputation for supporting world class climate science and has become a goto site for information on climate and climate change. Building on its success as a cross-faculty network for climate change related research at Imperial, the Institute's mission has been broadened with a view to increasing the impact and reach of the College’s environmental research, training and education more widely.”
