1st RMets Climate Change Forum

Risks and Resilience: Emerging challenges in a post Paris world

Call for Abstracts

The 1st Royal Meteorology Climate Change Forum runs under the theme “Risks and Resilience: Emerging challenges in a post Paris world”. This event brings together the UK climate science community and is a unique chance to discuss current needs, research challenges and policy requirements in an interdisciplinary way.

The interactive format of the day consists of keynote lectures in the morning, an extended poster and networking session over lunch and interactive round table discussions in the afternoon.

We invite poster abstracts from the broad field of climate change research including natural sciences, social sciences as well as interdisciplinary research approaches. We also welcome submissions targeting climate actions from the private and public sector, science communication and the science-policy dialogue. Please note that the audience will come from a range of backgrounds. We therefore encourage contributions to be written and presented in plain language.

Tuesday 4th June 2019

Coin Street Conference Centre, London

For more details and registration details:

www.rmets.org/climatechangeforum

Deadline for the submission of abstracts is Friday 26th April 2019
