## Knowing Meteors, Knowing u: Using meteor radar to investigate winds, waves and tides in the mesosphere

### <u>Shaun M Dempsey<sup>1,2</sup>, N P Hindley<sup>1</sup>, T</u> Moffat-Griffin<sup>2</sup>, C J Wright and N J Mitchell<sup>1</sup> <sup>1</sup> Centre for Space, Atmospheric and Oceanic Science, University of Bath, Claverton Down, Bath, UK <sup>2</sup> British Antarctic Survey, Cambridge, UK

British Antarctic Survey NATURAL ENVIRONMENT RESEARCH COUNCIL

### In this talk....

- What are atmosphere tides?
- Why do we care?

NERC SCIENCE OF THE ENVIRONMENT

- How can we measure tides in the MLT?
- First results of tides over South Georgia.
- Possible causes of tidal variability.

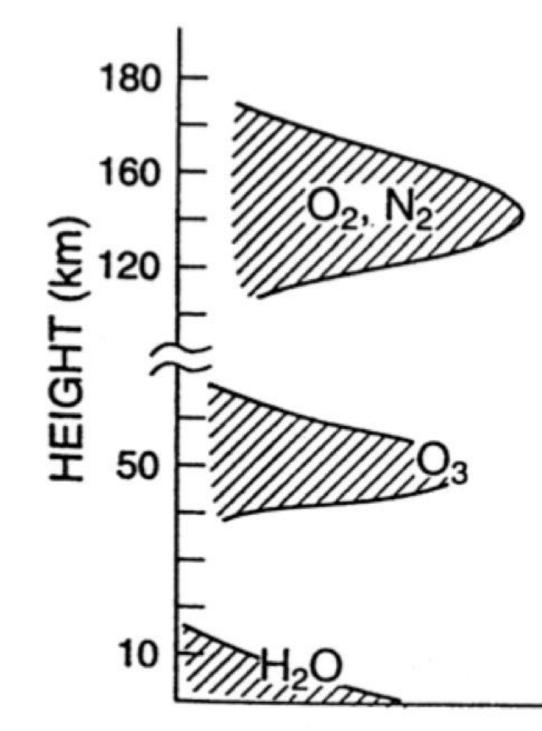

British Antarctic Survey

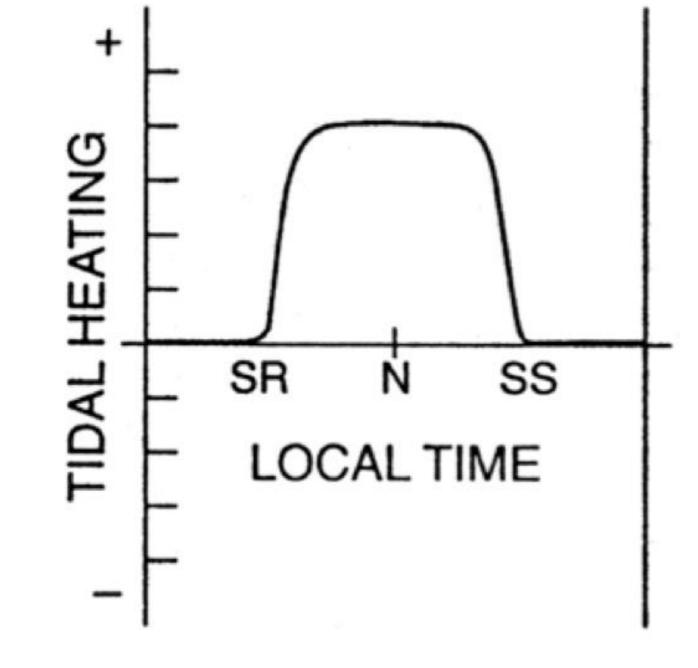

## What are atmospheric tides?

- Analogous to ocean tides but driven by solar heating - rather than the moon.
- Solar tides: produced by sun heating atmosphere.
- Tides appear in u, v, T,  $\rho$ etc.

NERC SCIENCE OF THE ENVIRONMENT

### TIDAL HEATING

British **Antarctic Survey** NATURAL ENVIRONMENT RESEARCH COUNCIL

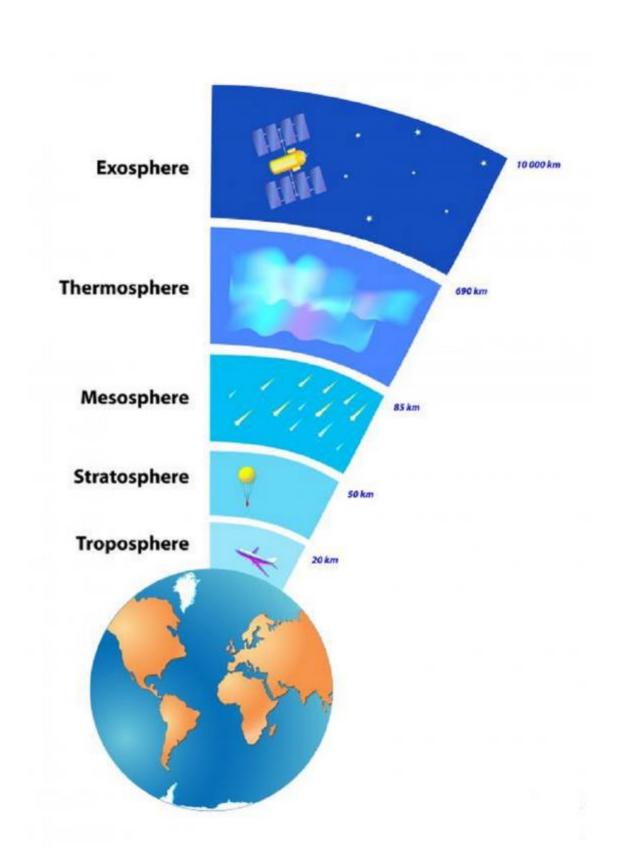

## Why do we care?

NERC SCIENCE OF THE ENVIRONMENT

- They couple the whole atmosphere from the surface to near-space.
- Next generation of GCMs will push into the thermosphere.
- Observations of tides are needed to constrain model development.
- However, MLT tides are notoriously difficult to measure...

Centre for Space, Atmospheric and **Oceanic Science** 

British **Antarctic Survey** NATURAL ENVIRONMENT RESEARCH COUNCIL

## How can we measure the tides in the MLT?

British Antarctic Survey NATURAL ENVIRONMENT RESEARCH COUNCIL

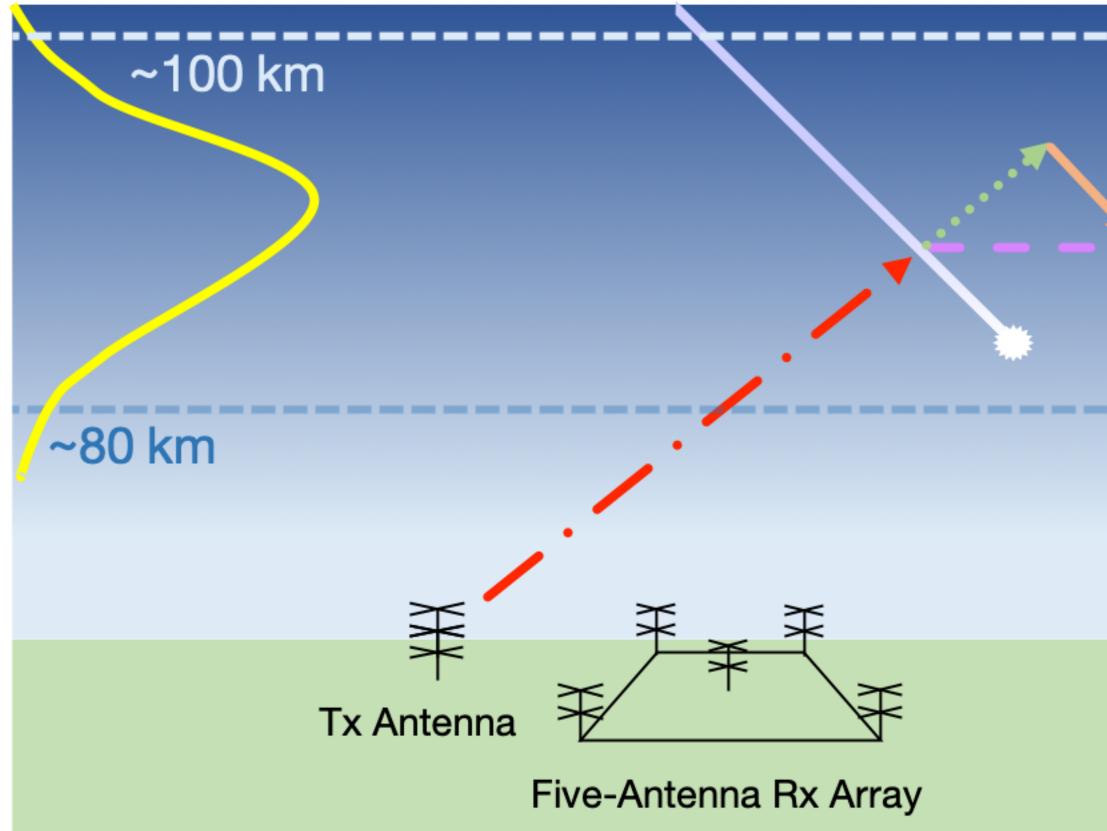

# Measuring tidal winds in the MLT - Meteor Radar

- Meteor radar operate continuously to give hourly winds.
- Thousands of meteors used for wind calculation in the MLT region every day.
- Use a Doppler shift method from the ionised trail to measure winds.

NERC SCIENCE OF THE ENVIRONMENT

British Antarctic Survey

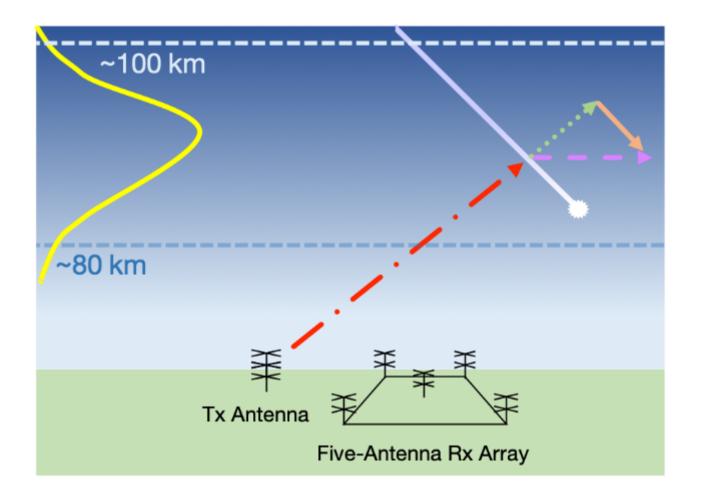

Centre for Space, Atmospheric and Oceanic Science

# Measuring tidal winds in the MLT - Meteor Radar

- Meteor radar operate continuously to give hourly winds.
- Thousands of meteors used for wind calculation in the MLT region every day.
- Use a doppler shift method from the ionised trail to measure winds.

NERC SCIENCE OF THE ENVIRONMENT

British Antarctic Survey

Centre for Space, Atmospheric and Oceanic Science

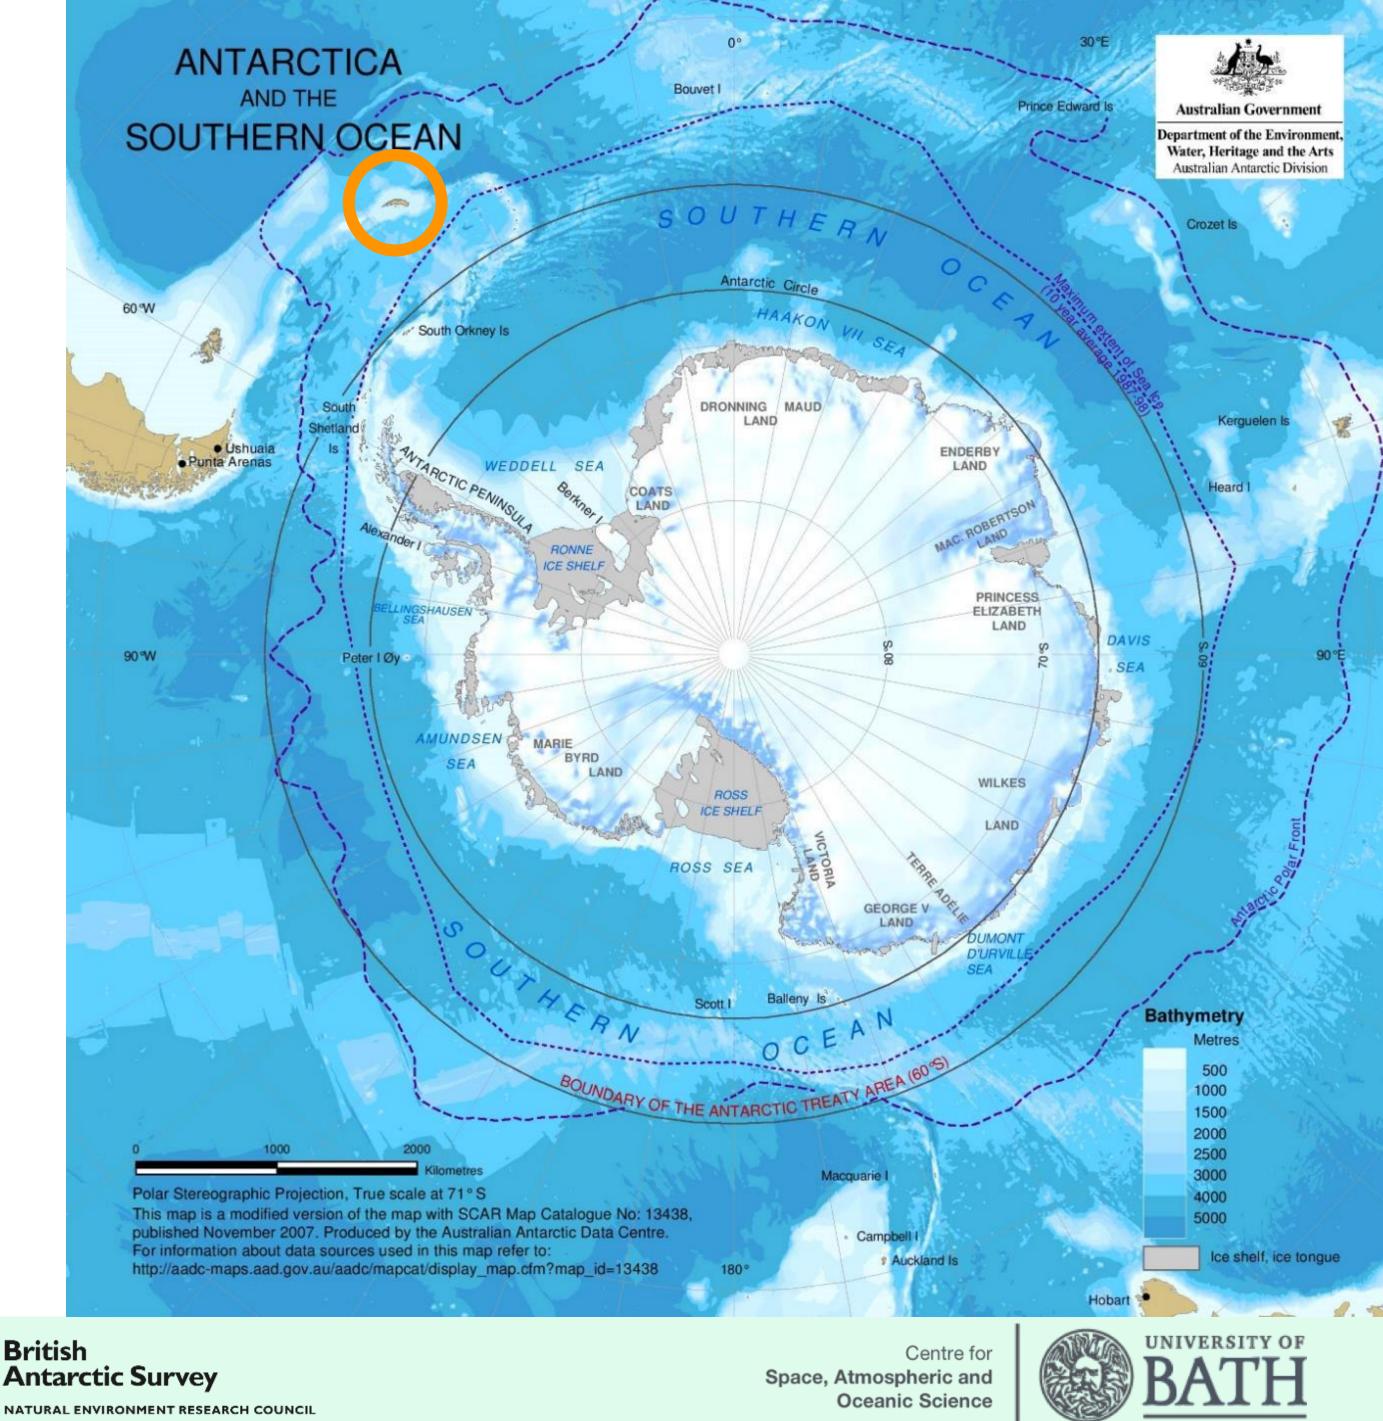

### Where do we measure?

- Not much land at 50S to 60S!
- 12-hour tide maximises at this latitude.
- We have a meteor radar on South Georgia (orange).

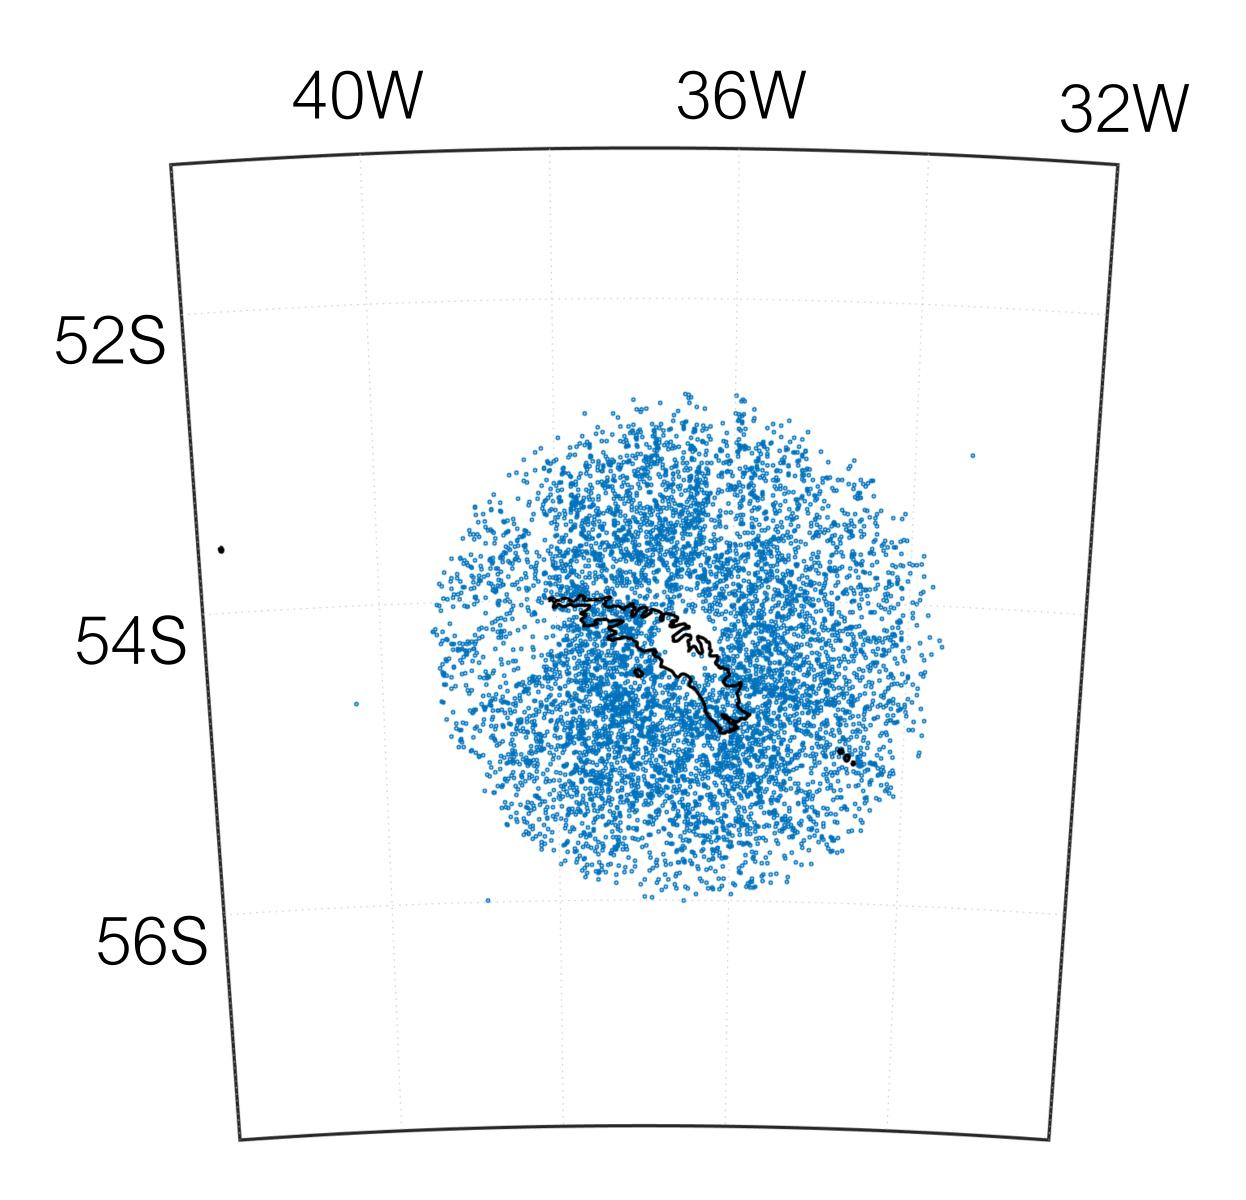

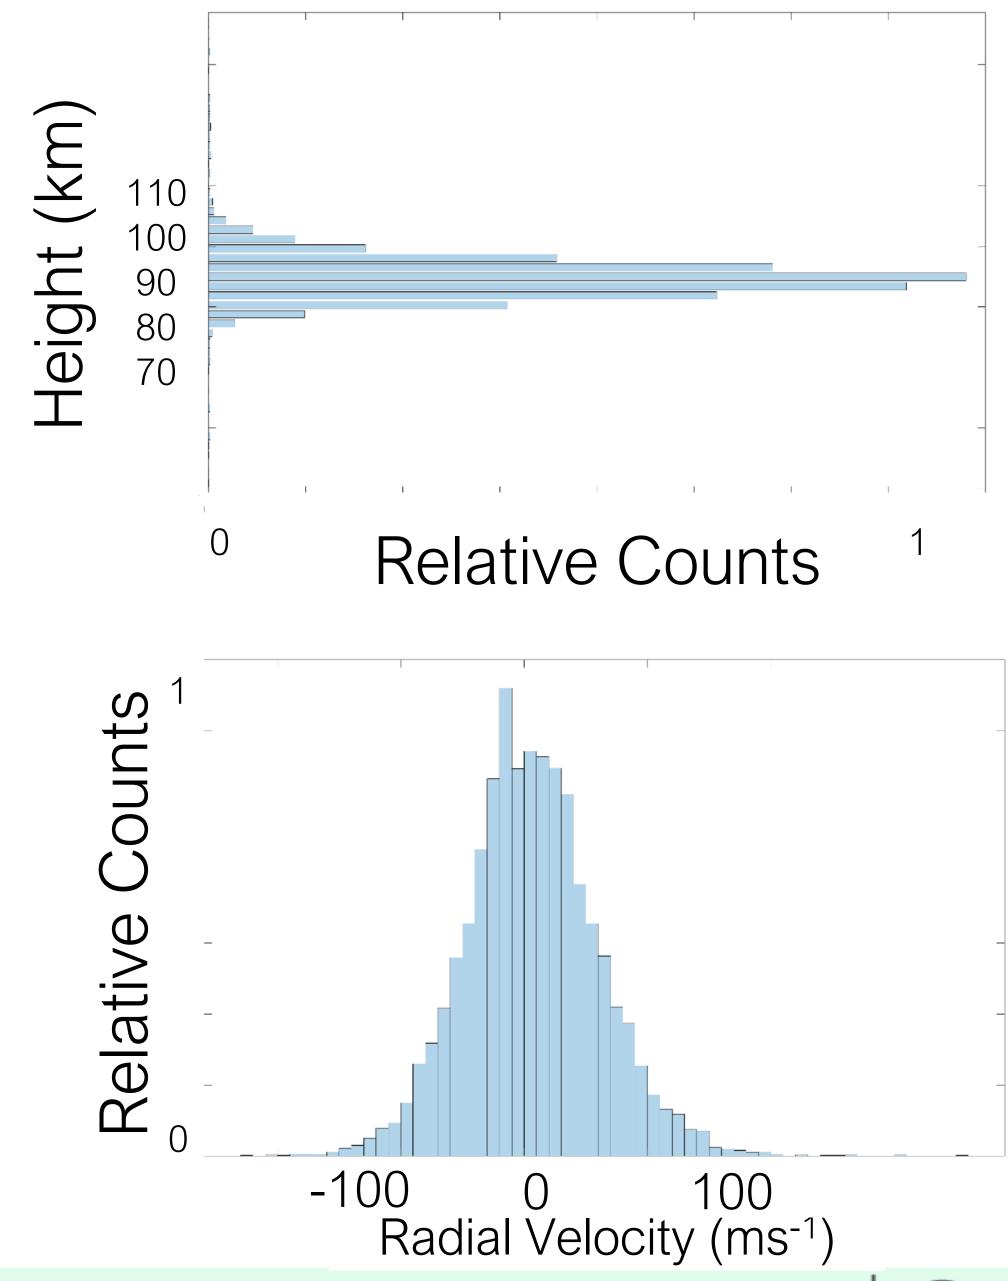

### British **Antarctic Survey**

British Antarctic Survey

## First results of tides over South Georgia.

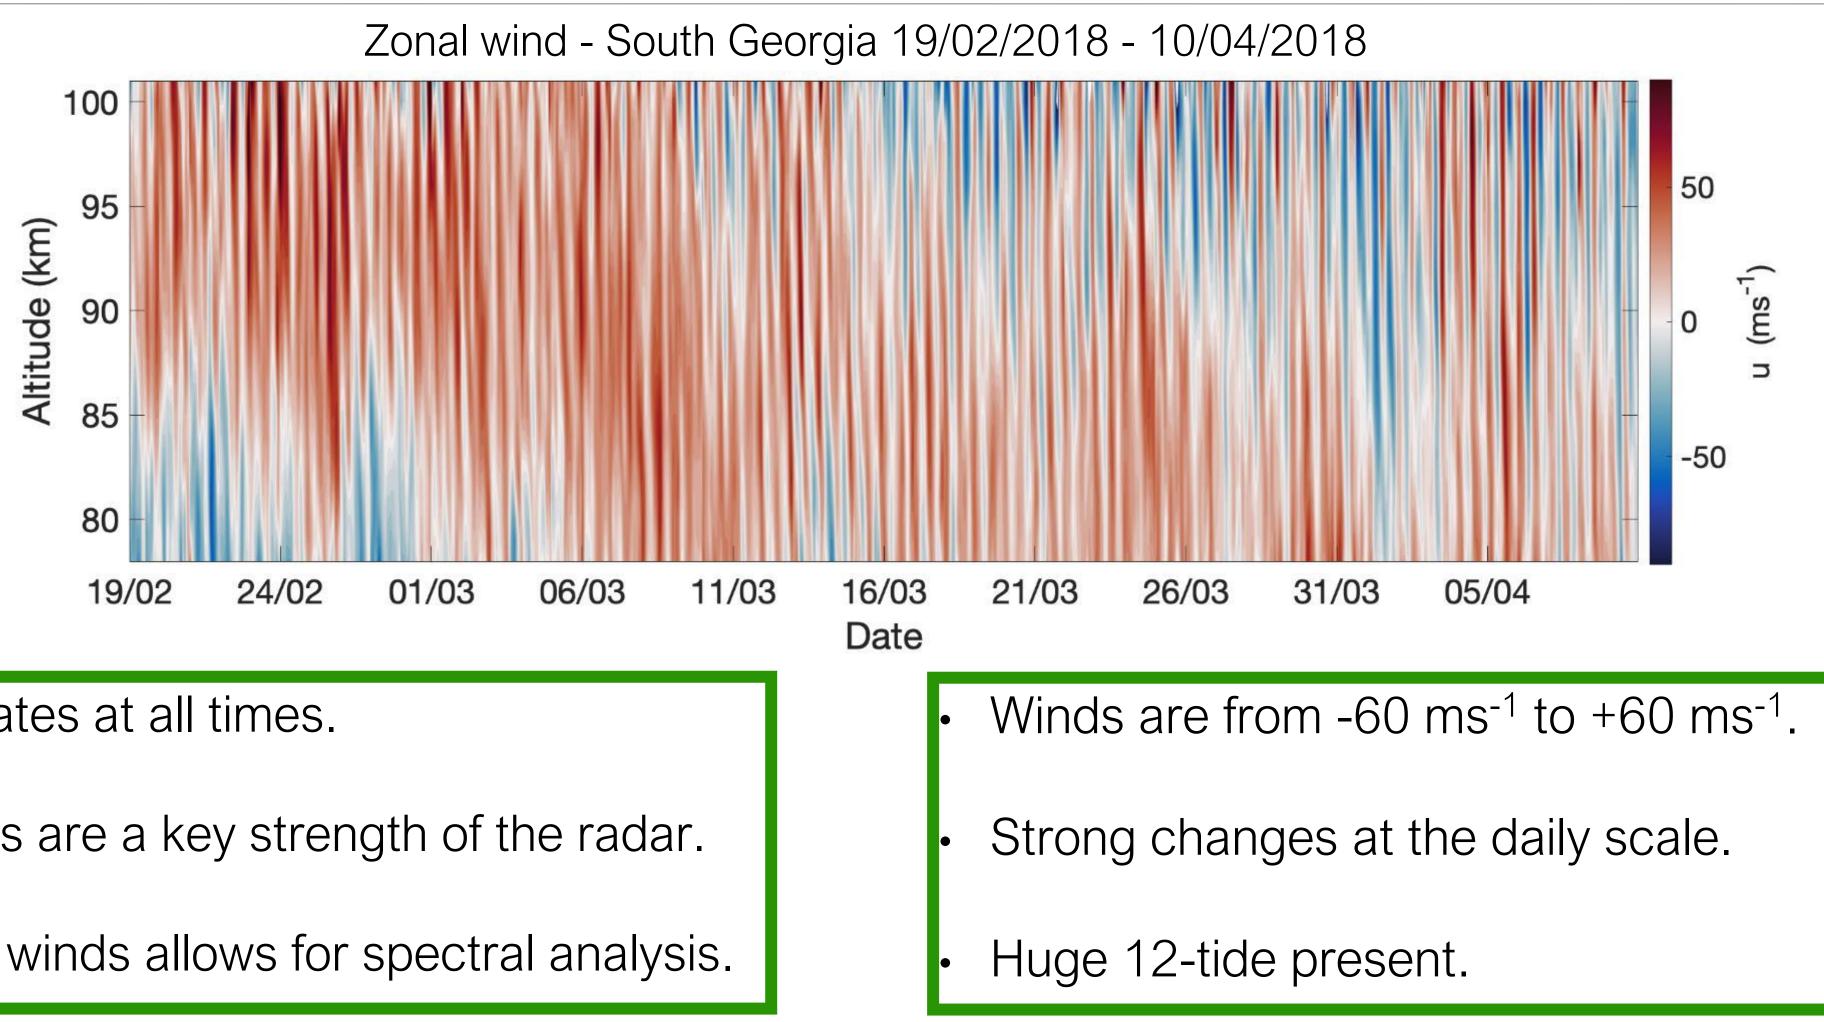

British Antarctic Survey

NATURAL ENVIRONMENT RESEARCH COUNCIL

# Meteor Radar MLT Winds

Radar operates at all times.

NERC

CIENCE OF THE

- Hourly winds are a key strength of the radar.
- Continuous winds allows for spectral analysis.

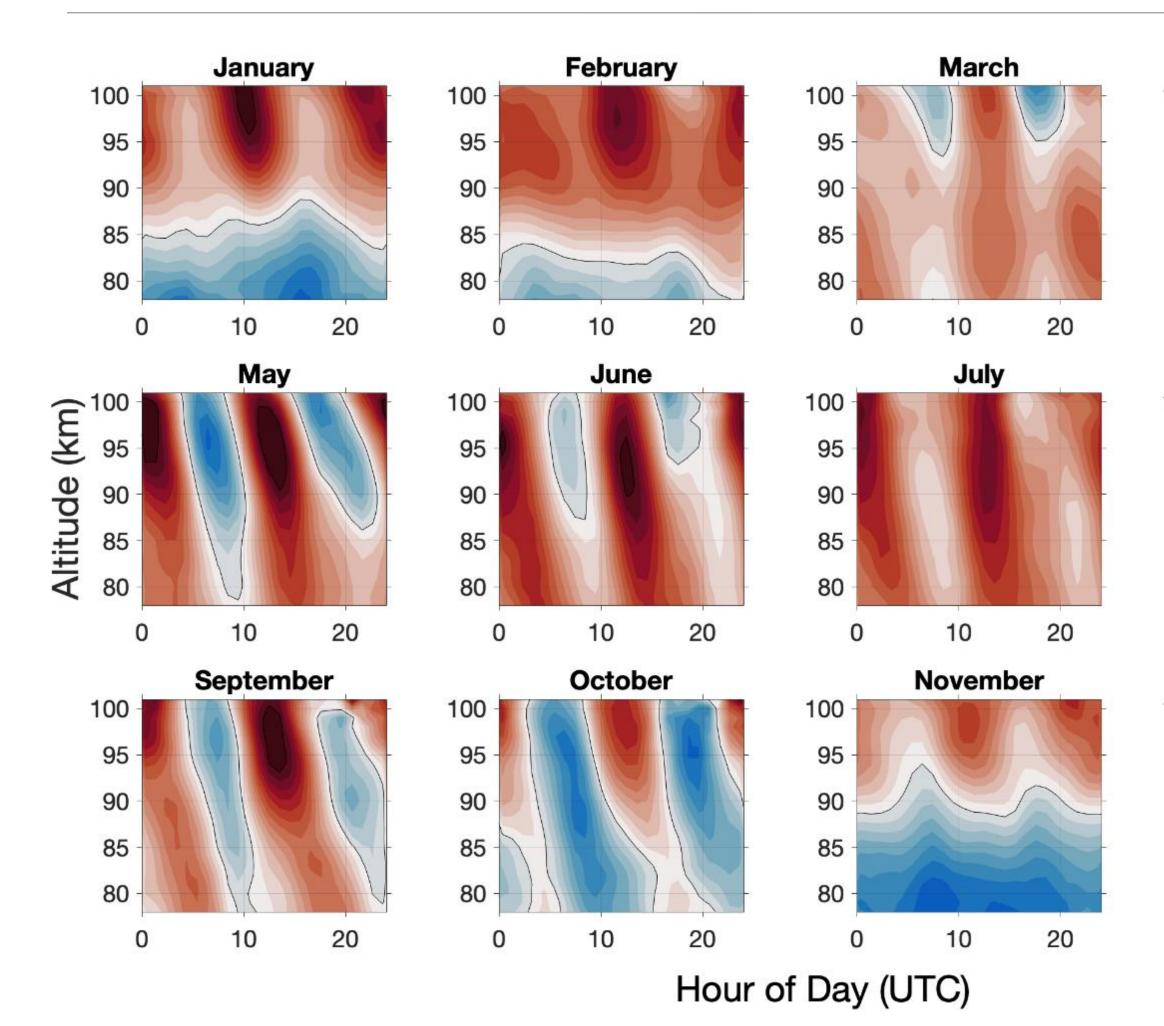

British Antarctic Survey NATURAL ENVIRONMENT RESEARCH COUNCIL

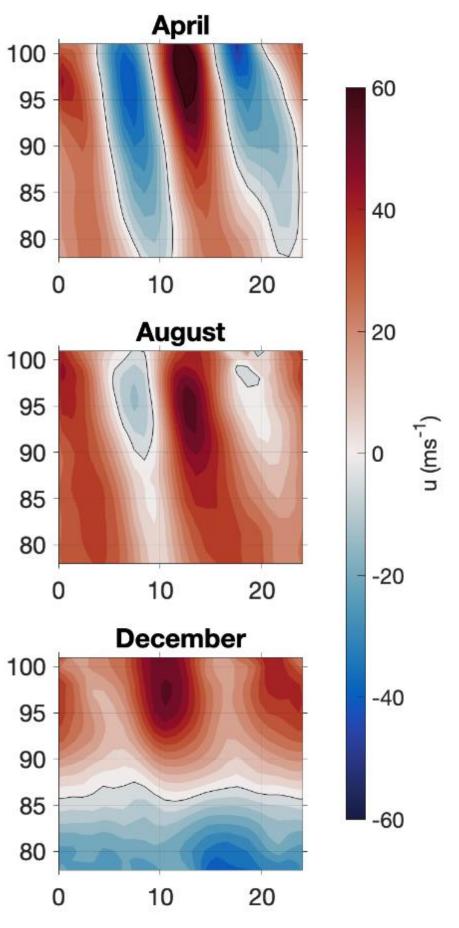

## Measuring the Tides

NERC

SCIENCE OF THE ENVIRONMENT

- Composite day (or mean day) highlights repeating features in the data.
- Black line indicates the 0 wind line.
- Very strong 12-hour tide during autumn into winter.

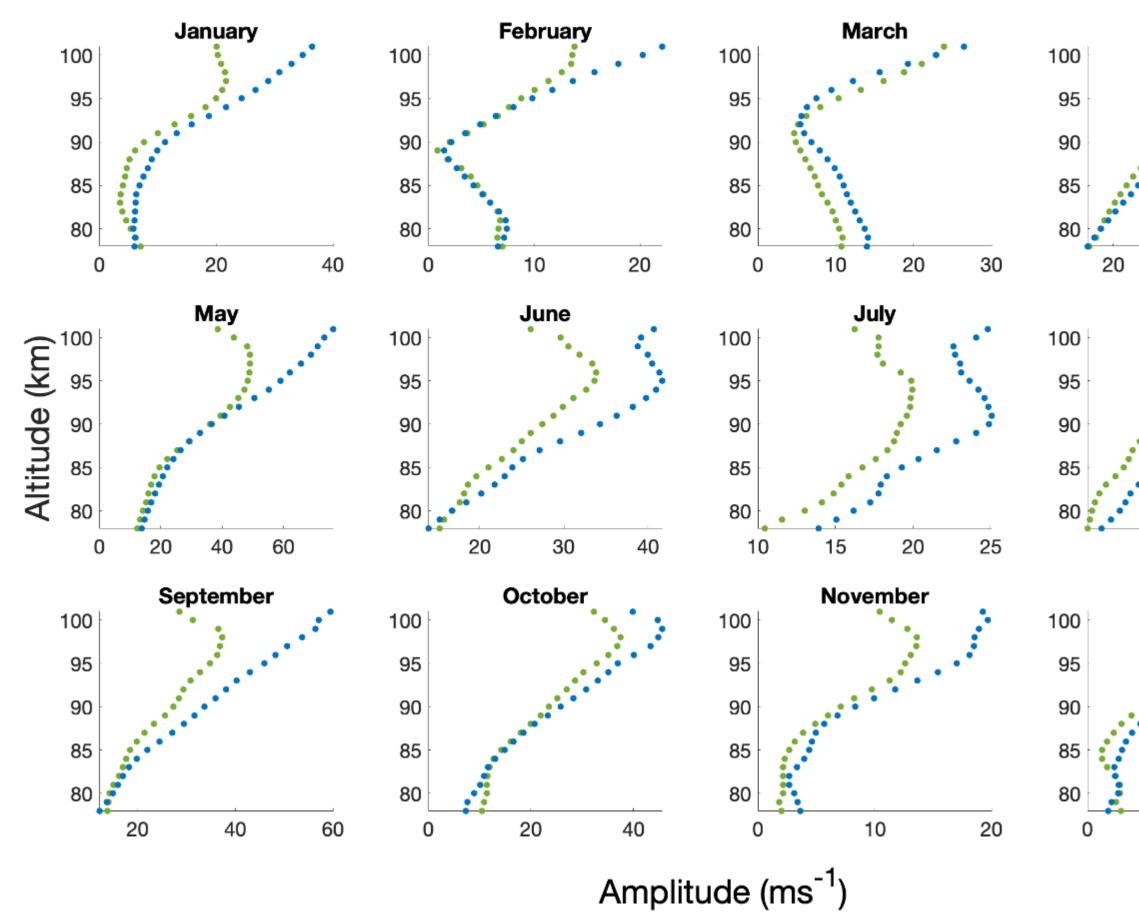

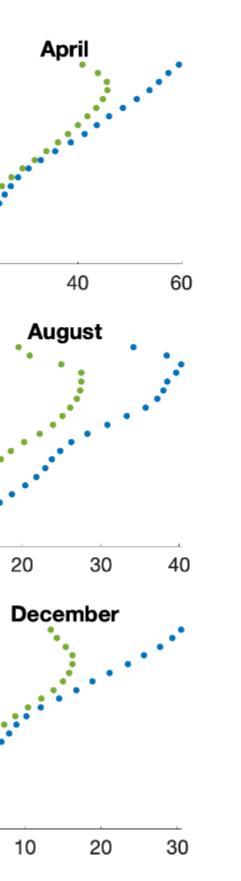

## Tidal Amplitudes - 12-hour tide

NERC SCIENCE OF THE ENVIRONMENT

- 12-hour tide amplitudes in zonal (green) and meridional (blue) directions.
- Tidal amplitudes usually larger at higher altitudes.
- Large month-to-month changes but zonal and meridional winds generally similar form.
- Amplitudes reach over 60 ms<sup>-1</sup> in the MLT.

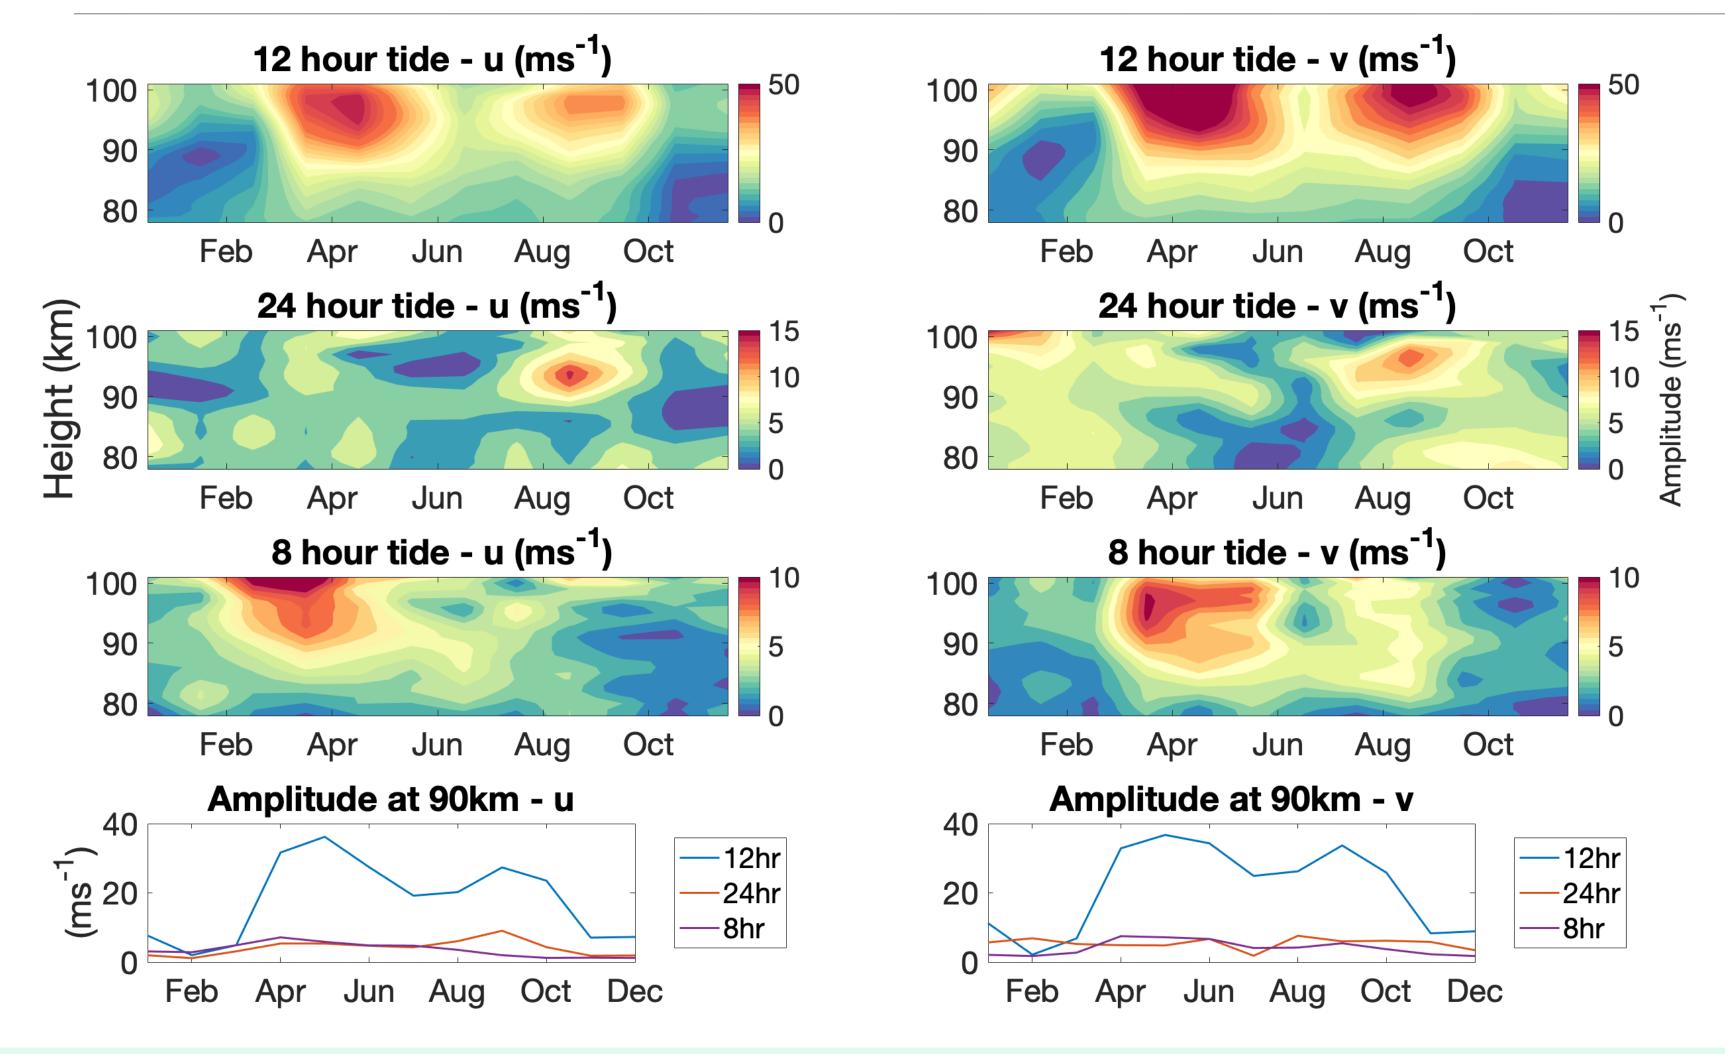

### British Antarctic Survey

NATURAL ENVIRONMENT RESEARCH COUNCIL

## Seasonal Variability of the tides

CIENCE OF THE NVIRONMENT

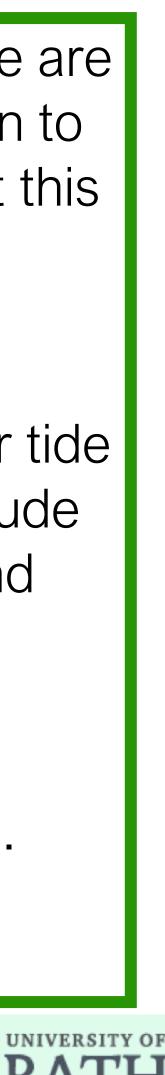

- 8- and 24- hour tide are weak in comparison to the 12- hour tide at this latitude.
- However, in v in February, the 12-hr tide is at a lower amplitude to the 24-hr tide and similar to the 8-hr.
- Strong seasonal variation in all tides.

Centre for Space, Atmospheric and Oceanic Science

Antarctic Survey

## Possible causes of tidal variability.

British Antarctic Survey

NATURAL ENVIRONMENT RESEARCH COUNCIL

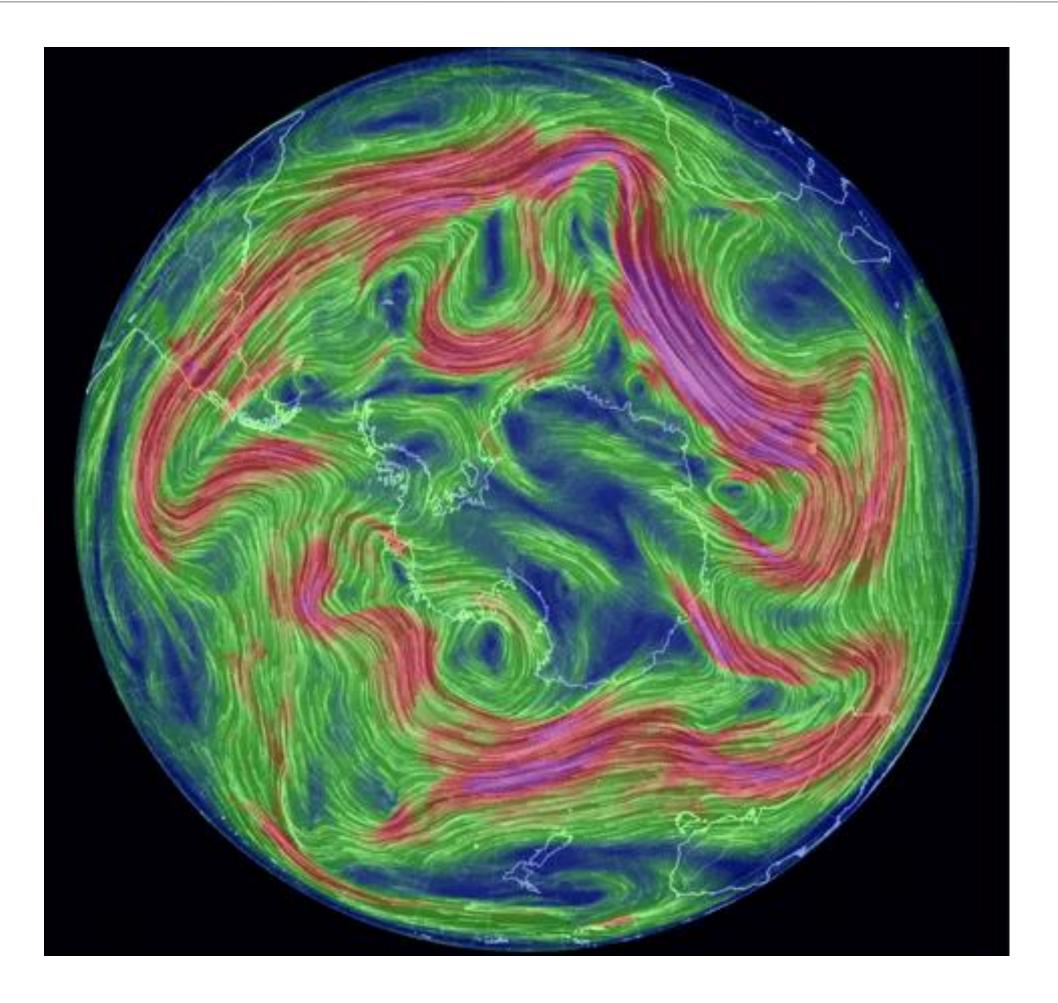

# Proposed drivers of tidal variability.

- Heating changes related to solar variability.
- Changes to atmospheric background such as wind.

NERC SCIENCE OF THE ENVIRONMENT

Non-linear coupling with other tidal modes and planetary waves.

Centre for Space, Atmospheric and **Oceanic Science** 

# Conclusions

NERC

SCIENCE OF THE ENVIRONMENT

- Atmospheric tides dominate the dynamics of the MLT region
- Radar provides exceptional data set to investigate tides.
- Massive tidal variability at all time scales from hours to annually.
- Next step: investigate physical drivers of this variation with the eCMAM model.

Centre for Space, Atmospheric and **Oceanic Science** 

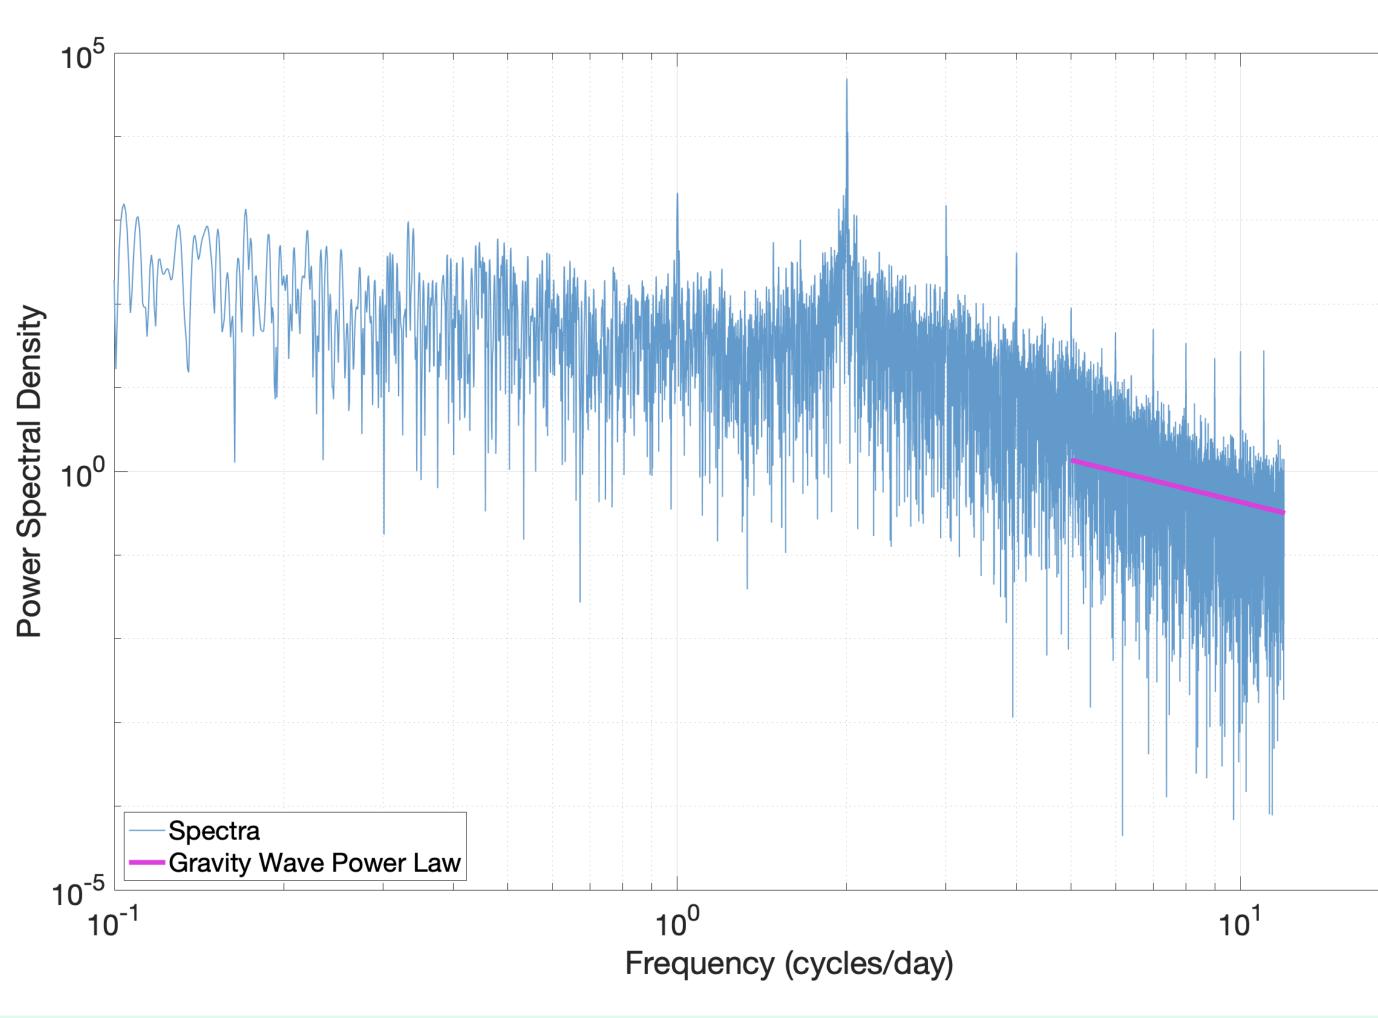

# Spectral Analysis

- A Lomb-Scargle periodogram can show us what repeating features are present in our data
- Here is 2018 over South Georgia.
- Atmospheric tides are strong particularly the 12-hour tide.
- Clear that atmospheric tides are dominating the spectral power.
- But how strong are they?
